

Regulating Station — *Texas*

Project Overview

Evers & Sons Inc. completed the installation of four pressure improvement DRS units tied into an existing trunkline in the North Texas region. Each site required construction of a 10' × 20' pad, followed by the installation of an Evers & Sons Inc., shop-fabricated 4" DRS. The scope also included a short 4" HDPE lateral and a hot tap connection into the active trunkline.

Components Installed:

- Installation of (4) E&S shop fabricated pressure improvement DRS
- (2) 4" HDPE hot taps
- (1) Road bore tie in

Functionality:

Installed to help with the mainlines pressure improvement to the customers distribution system to prevent future issues during extreme usage periods.

Company Overview

Evers & Sons Inc. is a third-generation, family-owned energy services company providing design and construction support across Engineering, Facilities, Fabrication, Pipeline, Maintenance, and Decommissioning & Asset Abandonment. Together, we connect engineering expertise with proven field execution to help our customers plan smarter, build efficiently, and operate with confidence.
