

12" Pipeline Well Connection Project — *Texas*

Project Overview

Evers & Sons Inc. completed the installation of 6,670 linear feet of 12-inch steel pipeline to connect new well production to existing infrastructure. The scope included directional drilling, prefabricated launcher and receiver installation, meter fabrication and piping, and construction of surface sites to support safe and reliable natural gas flow into the system.

Length & Configuration:

Installation of 6,670 linear feet of 12" steel pipeline

Components Installed:

- 1,500 linear feet of directional drills including a railroad crossing
- Installation of one each prefabricated 12" launcher and receiver
- Fabrication and installation of one 8" meter and associated piping
- Construction of (2) 100 × 100 surface sites

Functionality:

The installation enabled a new well connection to existing infrastructure, allowing natural gas to be introduced into the system.

Company Overview

Evers & Sons Inc. is a third-generation, family-owned energy services company providing design and construction support across Engineering, Facilities, Fabrication, Pipeline, Maintenance, and Decommissioning & Asset Abandonment. Together, we connect engineering expertise with proven field execution to help our customers plan smarter, build efficiently, and operate with confidence.
