

Pipeline Recommissioning

— Texas

Project Overview

Evers & Sons Inc. removed an existing 12-inch launcher and performed cleaning pig runs and caliper tool inspections within a previously decommissioned pipeline. The project scope included fabrication and installation of new 12-inch launcher and receiver assemblies, hydrotesting, and construction of a below-grade, 12-foot-diameter valve box with cover to support safe operation. All work was completed to return the pipeline to service in accordance with project specifications.

Functionality:

The project brought a decommissioned pipeline back online to increase capacity within the existing system.

Company Overview

Evers & Sons Inc. is a third-generation, family-owned energy services company providing design and construction support across Engineering, Facilities, Fabrication, Pipeline, Maintenance, and Decommissioning & Asset Abandonment. Together, we connect engineering expertise with proven field execution to help our customers plan smarter, build efficiently, and operate with confidence.
