

Evers & Sons Advances Fabrication Capabilities with Strategic Investment in PythonX® Technology

April 15, 2026 at 10:04 AM EST

HOUSTON—(BUSINESS WIRE)— Evers & Sons Inc. has made a significant investment in its Fabrication division with the addition of a PythonX® robotic plasma cutting system at its 18-acre fabrication facility in Caldwell, Texas. This advancement reinforces the company's continued focus on innovation & efficiency to deliver high-quality projects nationwide.

The PythonX® system introduces advanced automation into Evers & Sons' structural steel fabrication processes, enabling fully processed structural components to be completed with greater speed and precision. By consolidating multiple fabrication steps into a single automated workflow, the system reduces material handling, improves consistency, and accelerates production timelines.

The PythonX® system enhances production capacity while maintaining quality and accountability. All fabricated components continue to follow Evers & Sons' standards and code requirements. This ensures full visibility from raw material through fabrication.

Utilizing multi-axis robotic plasma cutting technology, the system can perform complex cuts, copes, bevels, slots, and layout marking in a single setup, thus eliminating the need for multiple machines and significantly reduces fabrication time. This allows for improved throughput, expedited scheduling, and increased flexibility in supporting complex project scopes.

This investment further positions Evers & Sons Inc. as a fully integrated partner for our customers in fabrication.

Key Points:

- Complex cutting
- AutoCAD compatibility
- Auto-calibrating tool center point (TCP)
- Reduced processing cost per ton

About Evers & Sons Inc.

Evers & Sons Inc. is a third-generation, family-owned midstream energy construction company providing services across Facilities, Fabrication, Pipeline, Maintenance, and Decommissioning & Asset Abandonment. Together, our integrated divisions provide solutions that build, support, and sustain the energy infrastructure across the United States.
